

# Self-Cleaning Commercial Gas Water Heaters

Sandblaster <sup>®</sup> Booster commercial gas water heaters are designed to provide high temperature water (usually 180°F) to commercial dishwashers. In these applications, the booster water heater is installed in conjunction with a standard water heater, which delivers lower-temperature water to serve the non-dishwashing needs of a restaurant or other foodservice application.

# State Hydro Cannon™ Self-Cleaning Device

- Significantly reduces buildup of lime, sand and other sediment in the tank
- Helps water heaters retain their rated efficiency longer and last longer, with low water heating costs

### **Induced-Draft Design**

- Built-in blower produces power-induced draft of makeup air prior to burner ignition, for more efficient control of heat through the flue collector
- Eliminates performance problems caused by negative indoor air pressure
- Requires no draft hood or barometric damper

## Rated as Category 1 Appliance

• Can be commonly vented with other Category 1 appliances, using standard metal type "B" vent

## **Multiple Anode Rods**

• Protects tank from corrosion

# **Three Water Connection Options**

- Hot and cold water connections can be made through top, front or rear of water heater
- Hydro Cannon device operates when front cold water connection is used

## **Intermittent Electronic Ignition**

- Provides flame failure response in less than one second
- Includes power ON/OFF switch
- Eliminates standing pilot

Factory-installed Temperature and Pressure Relief Valve

Maximum Hydrostatic Working Pressure: 160 psi

80% Thermal Efficiency

### Meets ASHRAE/IESNA 90.1-1999

 Also, design-certified by CSA International, according to to ANS Z21.10.3 standards governing storage-type water heaters

#### SUGGESTED SPECIFICATION

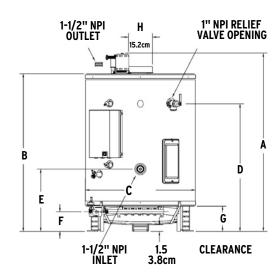

Gas booster water heater(s) shall be State Sandblaster, Model Number \_\_\_\_\_\_, with a 32-gallon storage capacity, an input rate of \_\_\_\_\_\_ BTU/HR, \_\_\_\_\_ gas, and a recovery rate of \_\_\_\_\_ gallons per hour at a \_\_\_\_\_ degree Fahrenheit temperature rise, and a maximum hydrostatic working pressure of 160 psi.

Unit(s) shall have a fan-assisted combustion system, providing a power-induced draft of makeup air prior to burner ignition. Unit(s) shall be equipped with intermittent electronic ignition with power on/off switch, which shall provide flame failure response in less than one second. The burner for the unit(s) shall be easily removable. Unit(s) shall be equipped with a factory-installed temperature and pressure relief valve, and a 2-3/4" x 3-3/4" tank inspection port.

 $\label{thm:continuous} The \ water \ heater \ tank \ shall \ be \ glass-lined \ and \ protected \ against \ premature \ failure \ in \ the \ following \ ways:$ 

- ${\bf 1.\,Against\,electrolytic\,corrosion\,by\,multiple,\,factory-installed\,anode\,rods.}$
- 2.Against failure due to overheating caused by the buildup of scale, film and other sediment by a self-cleaning device,positioned inside the tank so that it directs the flow of inlet water in such a way that microscopic particles of precipitated solids shall be kept in suspension and exhausted from the water heater on that or successive hot water draws.

Unit(s) shall meet or exceed ASHRAE/IESNA 90.1-1999, and be design-certified by CSA International, according to ANS Z21.10.3 standards governing storage-type water heaters.
